**FOR IMMEDIATE RELEASE - DRAFT**

## **Aeon Product Line Introduced with Broad Market Acceptance**

*San Francisco Chronicle names Cyberlux Solid-state Lighting Products as New Lighting Trend for the Home*

**RESEARCH TRIANGLE, N.C. MAY 26, 2005** – Cyberlux Corporation reports the successful introduction of its Aeon line of solid-state task and accent lighting products, which were unveiled at the 2005 Kitchen and Bath Industry Show (KBIS). The Aeon products, designed for installation in closets, cabinet interiors and under cabinets to illuminate kitchen and bathroom counters, are the first solid-state lighting products to provide a guaranteed light life for up to 15 years. Following this successful product launch, Cyberlux has more than 900 dealers, interior design firms, retailers and OEM customers identified as target customers. Industry professionals have recognized the Aeon line as a breakthrough lighting solution for home use.

“The response we have received indicates a remarkable appetite for energy-efficient, maintenance-free lighting products. Using our patented, solid-state lighting technology, we have introduced the Aeon line as the first products to provide heatless, white lighting for kitchen and bath applications, which include a breakthrough 55 lumens per watt brightness performance of the Aeon Pro,” said Don Evans, chief executive officer of Cyberlux Corporation.

As further indication of industry excitement, the *San Francisco Chronicle*, the major daily paper in the nation’s 6<sup>th</sup> largest media market, has selected Cyberlux solid-state lighting as one of the “Trends to Look For” in home products. Included in the May 25 review of KBIS, the Aeon products are included among the most important new advances in the industry.

The Aeon task and accent lighting products are made with diodal elements and do not require bulbs. The result is a product that is maintenance-free, cool to the touch with long-lasting energy-efficiency. The Cyberlux Aeon line includes three grades of products: Aeon, Aeon Plus and Aeon Pro.

- Aeon is the basic, easy-to-install, solid-state diode lighting fixture.
- Aeon Plus includes an additional variety of configuration possibilities to solve a large number of lighting needs.
- Aeon Pro is the top tier of the Aeon line. It includes three light rod lengths in addition to the configuration choices of the Aeon Plus.

Last week, Sandia National Laboratories, a government laboratory that has major research and development responsibilities in national security, homeland security, energy technology and economic competitiveness, recognized the breakthrough performance of the Aeon line of heatless, bulb-free, maintenance-free lighting products by Cyberlux. The recognition by Sandia Laboratories of the Aeon products and technology is posted on the lab's Web site at <http://lighting.sandia.gov/Xlightingnewsheadline.htm>.

The Cyberlux product line includes lighting solutions for military applications, emergency lighting for emergency power outages such as a hurricane or grid failure, and consumer products that provide heatless, long-lasting options and energy-efficient options for the home.

### **About Cyberlux Corporation**

Cyberlux Corporation (OTC Bulletin Board: CYBL) has created breakthrough lighting technology that provides the most energy efficient and cost effective lighting solutions available today. Several products are designed to address emergencies such as power outages or critical security lighting needs and others which bring newly developed *heatless* light into the home for use in closets, cabinet interiors and under cabinet lighting for kitchen counters. Cyberlux uses solid-state semiconductors, trademarked as its diodal™ lighting elements, which consume 92 percent less energy than incandescent elements and perform for over 20 years in contrast to 750 hours for traditional bulbs.
