**Cyberlux Featured in Exclusive Audio Interview
on InvestorIdeas.com**

Investor News and Research Portal Interviews President & COO

RESEARCH TRIANGLE PARK, N.C. July 18, 2005 – Today, Cyberlux Corporation reports that www.InvestorIdeas.com, a global investor news and research group, presents an exclusive audio interview with Mark Schmidt, president and chief operating officer of Cyberlux Corporation. The interview gives investor and industry insight into a company that is recognized for developing leading products and technology in the solid-state lighting industry.

"Solid-state lighting technology will result in major change for the lighting industry. The energy efficiency of white diodes is improving faster than many in the industry have expected, and the capability of solid-state lighting continues to advanced at a "Moore's Law" pace," said Mark Schmidt, president and COO of Cyberlux. "Our innovative products demonstrate the focus that Cyberlux has on developing practical solutions based on the latest diodal™ technology."

Cyberlux Corporation has developed breakthrough solid-state lighting products and technology that provides the most energy efficient and cost effective lighting solutions available today. Cyberlux uses solid-state semiconductors, trademarked as its diodal™ lighting elements, which consume 92 percent less energy than incandescent elements and perform for over 20 years in contrast to 750 hours for traditional bulbs. The ReliaBright products are designed to address emergencies such as power outages or critical security lighting needs for residential, commercial and military markets. The Aeon products bring newly developed heatless light into the home for use in closets, cabinet interiors and under cabinet lighting for kitchen counters. The Aeon Pro E product, with energy efficiency levels of 55 lumens per watt, exceeds the 40 lumen per watt requirement of California's Title 24 mandate for kitchen and bath lighting. In addition, Cyberlux consumer products, such as the the newly announced KEON KeyCap™, provide practical lighting solution for every consumer.

The InvestorIdeas.com audio interview can be found as an exclusive feature on www.InvestorIdeas.com.

About Cyberlux Corporation

Cyberlux Corporation (OTC Bulletin Board: CYBL) has created breakthrough lighting technology that provides the most energy efficient and cost effective lighting solutions available today. Several products are designed to address emergencies such as power outages or critical security lighting needs and others which bring newly developed *heatless* light into the home for use in closets, cabinet interiors and under cabinet lighting for kitchen counters. Cyberlux uses solid state semiconductors, trademarked as its diodal™ lighting elements, which consume 92 percent less energy than incandescent elements and perform for over 20 years in contrast to 750 hours for traditional bulbs.
