Cyberlux Featured on Home Builder Stocks Web site

HomeBuilderStocks.com Profiles Solid-State Lighting Company

RESEARCH TRIANGLE PARK, N.C., June 22, 2005 – Investor portal for home construction has launched a Web page devoted to Cyberlux Corporation, a solid-state lighting company.

Through the Investor Ideas Web portal at <http://HomeBuilderStocks.com>, investors will find detailed information about Cyberlux products, financial reports and the company's organization.

Cyberlux has created breakthrough lighting technology that provides the most energy efficient and cost effective lighting solutions available today. Cyberlux products are bulb-free, maintenance-free and extremely long lasting.

“Cyberlux products have a wide range of applications to many different industries, including the home builders, because they use 90 percent less energy than traditional light bulbs and remain cool to the touch, even after hours of use,” said Cyberlux President and COO Mark Schmidt.

Because Cyberlux products are extremely energy efficient, they are ideal to provide lighting solutions for residential construction projects.

“The amazing progress in solid-state lighting technology has provided us with new tools to allow lighting solutions that weren't possible until this year,” said Don Evans, CEO of Cyberlux. “Our engineers have used solid-state lighting technology to give contractors solutions for energy efficiency and the elimination of high heat associated with traditional halogen and incandescent products.”

Cyberlux has launched a new line of products designed for kitchens and baths. The company unveiled its new Aeon line of task and accent lighting products on May 10 at the 2005 Kitchen and Bath Industry Show in Las Vegas. Aeon products use solid-state lighting technology for fixtures in closets, cabinet interiors and under cabinets to illuminate kitchen and bath counters.

“With the technology used to create the Aeon line, we guarantee these products will perform for 15 years in a home environment,” said Schmidt.

The Cyberlux Aeon line includes three grades of products: Aeon, Aeon Plus and Aeon Pro.

- Aeon is a basic, easy-to-install, solid-state diode lighting fixture.
- Aeon Plus is track lighting offered in a number of configurations.
- Aeon Pro is the top tier of the Aeon line. It includes three light rod lengths which contain multiple diode arrays that focus three alternative intensities of light at the touch of a button.

In addition to being featured on <http://HomeBuilderStocks.com>, Cyberlux products are also recognized on <http://HomelandDefenseStocks.com> for their military applications.

About Cyberlux Corporation

Cyberlux Corporation (OTC Bulletin Board: CYBL) has created breakthrough lighting technology that provides the most energy efficient and cost effective lighting solutions available today. Several products are designed to address emergencies such as power outages or critical security lighting needs and others bring newly developed heatless light into the home for use in closets, cabinet interiors and under cabinet lighting for kitchen counters. Cyberlux uses solid-state semiconductors, trademarked as its diodal[™] lighting elements, which consume 92 percent less energy than incandescent elements and perform for over 20 years in contrast to 750 hours for traditional bulbs.
